

Industry Tips & Best Practices

These are the fundamentals experienced sellers revisit regularly — not one-time setup tasks.

Account Health Fundamentals

- ☐ Order defect rate, late shipment rate and cancellation rate checked weekly
- ☐ Policy violation notices addressed within 24-48 hours, never ignored
- ☐ Account health dashboard reviewed even when there are no active issues
- ☐ Multiple team members trained on account access to avoid single-point failure

Returns & Quality Control

- ☐ Return reasons categorized (size, quality, wrong item, changed mind) to find real patterns
- ☐ High-return SKUs investigated for sizing charts, description clarity, or QC gaps
- ☐ Returned-to-inventory units checked physically before resale where feasible
- ☐ Return rate factored into COGS and pricing decisions, not treated as a fixed cost

Cash Flow & Settlement Tracking

- ☐ Settlement cycle for each marketplace understood and planned around
Meesho's dual Order Date/Payment Date structure is a common source of reconciliation confusion.
- ☐ Reconciliation done monthly between orders, settlements and bank credits
- ☐ Ad spend and marketplace fees tracked against real settled revenue, not just order value
- ☐ Buffer maintained for chargebacks, claims and delayed settlements

Team & SOP Discipline

- ☐ Written SOPs exist for listing creation, order processing and returns handling
- ☐ New team members onboarded against documented processes, not verbal handovers
- ☐ Recurring tasks (reporting, ad review, inventory checks) assigned to a fixed owner
- ☐ Monthly review meeting held to walk through account performance as a team

Common Mistakes Sellers Make

- ☐ Chasing sales velocity with deep discounts that erode margin permanently
- ☐ Ignoring backend search term optimization after the initial listing goes live
- ☐ Scaling ad spend without checking break-even ACOS first

Industry Tips & Best Practices

- ☐ Treating each marketplace with an identical strategy instead of platform-specific tactics
- ☐ Delaying action on account health warnings until a suspension occurs

Operational habits that separate consistently healthy seller accounts from accounts that stall or get suspended.
